

# CREATING KNOWLEDGE 2018

## **Yewno Discover:**

### **Help your patrons engage, hypothesize and get more out of the library resources with AI**

---

*Manisha Bolina, Yewno, UK and Europe.*

Yewno Discover helps students and researchers **find precisely the right information they are searching for, regardless of discipline** and especially if it is interdisciplinary information. This new kind of visual knowledge discovery tool uses machine learning and computational linguistics to literally read over 200 million full-text articles and can guide users to the precise paragraph of information within this collection that is most valuable to their search.

This practical workshop will enable you to learn more how you can use Yewno Discover to engage your patrons to get more of the library resources. Be sure to bring your laptop!
